

Denial Recommendations: Variance Log Report for December 2008 Governing Board

11/18/2008

#	Var No	Project Name	Date Received	Date Completed	County	Status	Staff Text
1	4642	MAJESTIC ISLES ASSOCIATION, INC.	10/23/2008	10/24/2008	Palm Beach	DENIED	Application is recommended for denial. New trees and new sod can be watered every day except Friday for the first 30 days after installation. However, only zones where 50% or more of the area is new sod or plants can be watered under this rule. New plants in areas with less than 50% new plants can be handwatered as needed. Low volume irrigation areas should be separated from regular irrigation zones to allow the system to water efficiently. Areas that do not need additional water should not be watered daily as it promotes shallow roots rather than healthy deep roots.
2	4646	Serafin Sousa Jr, P.E.	11/17/2008	11/18/2008	Miami-Dade	DENIED	Application is recommended for denial. Applicant asked to be allowed to run entire sprinkler system for up to 15 minutes on cold mornings to protect his orchids. Orchid growing information indicates this is not the preferred method of protecting orchids and running the complete irrigation system is not a good use of the water. Applicant may hand water the orchids on cold mornings if desired. Additionally, applicant can install and use low volume irrigation equipment for the orchids.
