

## June 2006 Employee of the Month

Cal Neidrauer – Chief Consulting Engineer  
Water Control Operations Section, OMD

Cal is being recognized for his work on Lake Okeechobee issues for the Executive Office, the Water Resources Advisory Commission, and the Governing Board.

Cal Neidrauer routinely goes above and beyond normal work expectations to support this District's Water Resources mission. During the month of February he went well beyond the call of duty to address critical issues regarding Lake Okeechobee for the Water Resources Advisory Commission and the Governing Board. In addition he has been instrumental in facilitating and providing the SFWMD input to the Corps of Engineers on their expedited Lake Okeechobee Regulation Schedule Study (LORSS).

Dr. Susan Gray, Deputy Department Director, Watershed Management, had provided the following in support of Cal's nomination:

“Cal has demonstrated the highest level of technical excellence and professionalism in dealing with challenging issues related to Lake Okeechobee operations. Cal's knowledge and understanding of both water management system operations and the modeling used to simulate Lake operations, as well as his very strong communication skills, makes him invaluable in explaining the complexities of the system to technical staff and the general public. He is always willing to go the extra mile to help out and does so with a smile.”
