## SURVEYOR'S REPORT

### Vertical Control Survey

Hyatt Survey Services, Inc. operating under sub-contract to George F Young, Inc. and the South Florida Water Management District was tasked with the execution of a Vertical Control Survey in support of the District's Benchmark Densification and Monitoring Well Elevation Initiatives.

### Purpose

The purpose of this survey was to establish benchmarks at each of 22 monitoring wells on the Buck Island Ranch Facility in Highlands County, Florida. A minimum of two (2) benchmarks were established at each well.

1. “A” benchmarks are NGS Class “C”, “poured-in-place,” concrete monuments with SFWMD bronze disks set flush with the ground.
2. “B” benchmarks were set on the top of existing 1.5” steel pipes at each well site. Each pipe protrudes approximately 3” above the surrounding ground.
3. “C” benchmarks were set on the top of the 3” PVC well casing at each well site.

Elevations were determined by digital differential leveling performed in accordance with the Minimum Technical Standards (MTS) for Vertical Control Surveys as set forth in Chapter 61G17-6 FAC and the requirements for Second-Order Class II Vertical Control Surveys as established by the Federal Geodetic Control Sub-committee.

### Vertical Control

All elevations are based on National Geodetic Survey Benchmarks “H-437” and “J-437” both Second Order, Class I vertical control monuments. The vertical datum used was NAVD 88 (North American Vertical Datum of 1988).

### Level Lines

All level runs were double-run under differing atmospheric conditions and meet or exceed the formula of the Square Root in miles of the level run multiplied by 0.03’. A Leica DNA 3003 digital level and two 3 meter aluminum bar-coded “Invar Rods” with aluminum struts were utilized to obtain all leveling data.

The processing of the field data was performed by and under the supervision of Mr. Ronnie Taylor, Florida’s NGS Advisor. NGS’ “WDDPROC” leveling software was utilized to process the field data and to create the NGS benchmark descriptions.

AE6391 VERT ORDER - SECOND CLASS I

AE6391 The horizontal coordinates were scaled from a topographic map and have  
 AE6391 an estimated accuracy of +/- 6 seconds.

AE6391 The orthometric height was determined by differential leveling  
 AE6391 and adjusted by the National Geodetic Survey in March 1998.

AE6391 The geoid height was determined by GEOID03.

AE6391 The dynamic height is computed by dividing the NAVD 88  
 AE6391 geopotential number by the normal gravity value computed on the  
 AE6391 Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45  
 AE6391 degrees latitude (g = 980.6199 gals.).

AE6391 The modeled gravity was interpolated from observed gravity values.

 AE6392.and adjusted by the National Geodetic Survey in May 2001.

AE6392.The orthometric height was determined by differential leveling  
 AE6392.and adjusted by the National Geodetic Survey in March 1998.

AE6392.The X, Y, and Z were computed from the position and the ellipsoidal ht.

AE6392.The Laplace correction was computed from DEFLEC99 derived deflections.

AE6392.The ellipsoidal height was determined by GPS observations  
 AE6392.and is referenced to NAD 83.

AE6392.The geoid height was determined by GEOID03.

AE6392.The dynamic height is computed by dividing the NAVD 88  
 AE6392.geopotential number by the normal gravity value computed on the  
 AE6392.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45  
 AE6392.degrees latitude (g = 980.6199 gals.).

AE6392.The modeled gravity was interpolated from observed gravity values.
