9-Jul-12	11-Jul-12	OSF-109: AWE had trouble getting back into the 12-inch casing with the bit. Tried through the morning, then the clutch went down on the rig. Stopped for repairs.
12-Jul-12	13-Jul-12	OSF-109: Went back in with 12-inch bit, but no progress. 12-inch bit is broken. Trip out. Trip back in with 10-inch bit. Returned a lot of metal, some milling of casing has ocurred.
14-Jul-12		OSF-109: AWE finishes drilling out grout plug from 12-inch casing. Drills to 1497 ft bls.
16-Jul-12	19-Jul-12	OSF-109: Pilot-hole drilling 1,497 to Total Depth (2,000). Run 3 interval tests: (1489 - 1635), (1489 - 1762), (1489 - 2000)
20-Jul-12	21-Jul-12	OSF-109: Unable to enter borehole with logging tools. Video survey shows the 12-inch casing is bent over and hooked toward the inside ~906 ft bls. Progress halted for casing repair. Enter with 8 - 12 reamer bit to mill out the casing to the correct diameter.

23-Jul-12		OSF-109: Attempt second video survey of the damaged casing to see if the repair work was successful. The camera got stuck again. Attempts to withdraw it led to a snapped cable, and the tool and much cable fell downhole.

30-Jul-12	3-Aug-12	OSF-109: Work on repair of damaged back-off. Ran into hole with a 12-inch maximum diameter reaming tool, to try and mill casing to 12-inch where bit damage bent it inward.
4-Aug-12		OSF-109: Formation logging (1,490 - 2,000 FE BLS)
6-Aug-12		OSF-109: Pump installed to 150 ft bls for production logging. Well pumped to purge freshwater that was added during casing repair operations. Generator problem.
7-Aug-12		OSF-109: While attempting static fluid logging, the logging cable was cut, apparently by the flange on the pump riser, dropping the FRT tool and 900 feet of cable down the hole.
8-Aug-12		OSF-109: Fishing for geophysical logging tool and cable.
9-Aug-12	16-Aug-12	OSF-109: Attempt to run production logs, but pump won't run. Diagnose problem with the pump motor, which must be sent off-site for repairs.
17-Aug-12		OSF-109: Repaired pump re-installed. Problem with VFD, must be wired directly to generator to run.
18-Aug-12		OSF-109: Production logging. Flowmeter snagged on casing ~900 ft bls. Fish for and recover hung flowmeter.

25-Aug-12		OSF-109: Complete removal of packer assembly & prepare for borehole backfill.
27-Aug-12		OSF-109: No work on-site due to hurricane Isaac.
28-Aug-12		OSF-109: Backfill borehole with gravel from 2001 to 1760 feet BLS., then cap with 15 feet neat cement to 1745 feet bls. Final well depth.
29-Aug-12	3-Sep-12	Demobilize rig from OSF-109, and set-up over OSF-105.
5-Sep-12		OSF-105: Drilled nominal 10-inch pilot hole from base of the previous drilling (1,217 ft bls) to 1,350 ft bls, then tripped out to prepare the hole for coring.
6-Sep-12	7-Sep-12	OSF-105: Core barrel lowered to 80 ft off bottom, and refuses to advance. Three times though the day and night, AWE tripped out with the core barrel, then back in with the bit to wipe the hole to the bottom. Can feel large rocks beeing pushed down the borehole by the bit. When the core barrel was attempted again, there was again obstruction. Decided abandon attempts to core at this depth and proceed with pilot hole drilling to the second core target. The borehole was advanced to 1,375 ft bls.

10-Sep-12		OSF-105: Pilot-hole drilling 1,375 - 1,423, and condition the borehole for logging. Geophysical logging: Borehole video, x-y caliper & borehole deviation survey. Able to log only to 1,100, where borehole blocked by large boulder.
11-Sep-12		OSF-105: After review of logs and video, SFWMD & AWE concur that there is an abundance of loose rock material in the borehole, and prospects for successful coring operations are poor. The decision was made to abandon further core attempts, and resume reverse-air drilling.
11-Sep-12	12-Sep-12	OSF-105: Pilot-hole drilling 1423 - 1,750 ft bls (TD). Wiper trip into casing to prepare borehole for geophysical logging.
13-Sep-12		OSF-105: Air-development of borehole (6 hrs), in preparation for logging. Trip out of the borehole with the bit.
14-Sep-12		OSF-105: Attempt geophysical logging, but find borehole blocked at 1,255 ft bls. Complete another wiper run and attempt logging again. This time the borehole is blocked at 1,144 ft bls. Shut down 1300 as AWE and SFWMD assess options.
17-Sep-12	19-Sep-12	OSF-109: Re-configure well-head, and install packer at 922 ft bls. Run pressure test to evaluate mechanical integrity of damaged 12-inch casing back-off. The casing meets criteria.
20-Sep-12	26-Sep-12	OSF-109: Fabricate and install adaptor for repair of 12-inch casing back-off.
27-Sep-12		OSF-109: Verification video and caliper log for back-off repair. Repair is complete.
27-Sep-12	29-Sep-12	OSF-105: AWE mobilizes 5-inch I.D. drill pipe to site, installs in OSF-105, wiper to total depth, then hold as protective casing at 1,218 ft bls.
1-Oct-12		OSF-105: Attempt final logs through 5-inch I.D. drill pipe, installed to 1218 ft BLS. Run caliper to bottom, but the tool stuck inside the drill-pipe circa 1,100 ft bls. After repeated attempts to dislodge, had to trip out of the hole with the tool in-place, clamping and cutting the logging cable with each stick of drill-pipe removed.
2-Oct-12		OSF-105: No data-collection activities on-site. The logging tool was returned to the shop for a new cable spool and repair of the caliper tool.
3-Oct-12		OSF-105: Complete final logs through the drill-pipe, formation logs and static flow and fluids.
4-Oct-12		Site C: USGS conducts OBI logging OSF-105 (1226 - 1750) / OSF-109 (1490 - 1745). Time: (OSF-109 0900 - 1128), (OSF-105 1153 - 1506)
5-Oct-12		OSF-105: Prepare for borehole back-fill through the 5-inch I.D. Drill pipe
8-Oct-12		OSF-105: Waiting for gravel delivery.
9-Oct-12	11-Oct-12	OSF-105: Gravel back-fill from 1,750 - 1,312, then cap with 12 feet neat cement.
12-Oct-12		OSF-105: Tag cement @1,300, then trip out with tremie and temporary drill pipe liner.
13-Oct-12	17-Oct-12	Site C: Break-down rig from well OSF-105, and re-configure over OSF-109
18-Oct-12	19-Oct-12	OSF-109: Install 1,700 fr 4-inch FRP tubing with cement baskets for grout.
22-Oct-12	24-Aug-12	OSF-109: Tremie grout 4-inch FRP from 1,694 (moved up from 1,700 ft due to hole irregularity at that depth) to 1,573 F BLS.
26-Aug-12		OSF-109: Conduct successful pressure test of the installed FRP tubing.

26-Oct-12		OSF-109: Develop lower monitor zone to remove turbidity from borehole backfill.
