The figure displays depth profiles for several parameters. The left panel shows the GAMM (CPS) profile, which is a jagged black line fluctuating between approximately 10 and 150 CPS. The right panel shows the Depth (1ft:100ft) profile, which is a solid black line fluctuating between approximately 10 and 100 Ohm.m. The right panel also includes sub-plots for ILD (Ohm.m) and ILM (Ohm.m), which are represented by dashed blue lines. The ILD and ILM profiles show significant fluctuations, with ILD reaching up to 100 Ohm.m and ILM reaching up to 100 Ohm.m. The depth axis ranges from 0 to 30.0 feet.

NOTES:
While due care has been exercised in the performance of these measurements and observations, in accordance with methodologies utilized by the general practitioner, RIMBAKER LLC can make no representations, warranties, or guarantees with respect to latent or concealed conditions that may exist, which may be beyond the detection capabilities of the methodologies used, or that may extend beyond the areas and depths surveyed.
The geophysical well logs show subsurface conditions as they existed at the dates and locations shown, and it is not warranted that they are representative of subsurface conditions at other locations and times.
If, at any time, different subsurface conditions from those observed are determined to be present, we must be advised and allowed to review and revise our observations if necessary.
